

**Amendments to the Specification:**

Please replace paragraph [0038] with the following amended paragraph:

---

[0038] In this embodiment, the stiffener 24 is sandwiched between the main deck component 22 and the cover 26. Thus, the fasteners used to secure the cover 26 to the main deck component 24 22 also secure the stiffener 24 to the main deck component 22. However, the stiffener 24 can be secured to the main deck component 22 in other ways such as mechanical fasteners connected between the main deck component and the stiffener or by overmolding the stiffener with the main deck component. Whatever the connection between the cover 26 and the main deck component 22, the cover 26 can enhance the flexion resistance of main deck component 22.
